you're welcome

it's a long paper, so could take awhile to find a referee, and then for them to read it carefully

Steven,

I received the referee's comments. I am working with my adviser to tighten down the analysis and asymptotic arguments. I am going to take my time revising to make sure everything is tight in the long typeset proofs. After that, I will submit the revision.

Thanks for corresponding.

Steven,

I have been working on the article and caught a number of typographical arithmetic errors. Is there a timeline for

revisions at JNT? I want to be able to resubmit it by the beginning of the summer semester in about a month.

nope

take as much time as you need

Steven,

I am aiming to get the revised article resubmitted today. I noticed the due date in the screenshot when I logged in. I just want to confirm again that this will not be a problem.

absolutely not a problem

much better to take the time needed

Steven,

Agreed in hindsight. It could be another few weeks before things settle down. For whatever it's worth (I know not well what the grad students at Princeton would have been cursing out loud about, or in the name of), but I wrote someone back about my flawed lemma from the referee report using language similar to the following: God **** you, Erdos, as UIUC grad students have been known to scream out loud while shaking their fist in the air in Urbana! (*Have a sense of humor, at least for me right now...*)

It's not a catastrophic error or observation, but is going to incur me much more typesetting and printouts to rectify. I will resubmit as soon as I reliably can.

Thanks for correspondence.

No worries

Been there myself

Was cursing at the people I serve with on the school committee as we continue to screw the kids

Outlets needed

I'm sorry about that.

I had my RA adviser light an "Erdos candle" for me tonight to let him know "I'm pissed". It's kind of like a rite of passage in some circles to get to shake your fist at Erdos, damn him, know why and what it means. Progress on editing the manuscript anyways.

Thanks for the thoughtful comments.

I just wanted to follow up about what I meant.

After I talked with my cousin the tech wiz online about Hungarian mathematicians, and how my uncle (his dad) was always the one that encouraged me to work on math research and publish it from an early age in my career, my Erdos-Kac theorem hiccupped at me funny. Hmm. Hence damning Erdos, and more of the nonsensical things you probably would be bored if I tried to explain out of context. I will try to keep it to the article in this thread when I write you back again.

Steven,

I just submitted the revision of my article. Thanks for all of your help and correspondence!

Do you want me to send you an unofficial version of the article here?
