Hello family,

Over the last couple of months, I finally saw a solution to a famous math conjecture I have been working on for years now. It is like magic. Something has been helping me through this. It wasn't intentional that the submission dates ended up coinciding with an anniversary of Mama passing away. Her spirit (and my mathematical talent) made this happen amidst the craziness we call USA, North America, Earth these days circa Trump. I knew back in 2017 that the identities in the first preprint manuscript were gold: primality characterized by a convolution of an additive (hence limiting probability distribution) and the Moebius function.

I submitted the recent preprint to arXiv. Usually when I post a manuscript there, they tell me it will be published in a few days before which I can make small revisions. This time, they sent a different message saying that they need 2+ business days to review/referee the article to make sure it is reasonable enough to be in their archive. It passes basic scrutiny so that there are not any obvious or easy to pick out glaring errors as it stands:

<http://arxiv.org/abs/2604.23517>

I submitted it this weekend - the four year anniversary of my mom passing away. Her spirit is still around and watching out / guiding through this crazy time period.

Later,

MDS
