Hello Professor Granville,

I presented a paper at the UMontreal ANT seminar a few years back while getting my doctorate at Georgia Tech. You suggested that taking the logarithm of the functions I was looking at would yield a smooth probability distribution. You also suggested (back then) as a remark that these results could yield applications to sieve methods. I am confident that the methods in the following paper can be generalized:

<https://arxiv.org/abs/2102.05842>

Can you please provide more details about your intuitions on the sieve method applications? I am open, and would be honored, to collaborate on this topic.

Thank you. Take care. Sincerely,

Dr. Maxie Dion Schmidt

Dear Maxie

I am afraid I have no memory of what I said and in what context so cannot be of much help to you.
Good luck with your researches

Andrew G
